

## Description

Exepd manufactures customized operation panels for application in potentially explosive areas classified as zone 2 und 22. For these purposes, certified operator panels and components, such as terminals, cable glands, control and signal elements are used. During manufacture of the control cabinets, we at Exepd take into consideration all individual requirements of the components, as well as their mutual interaction with regard of heat development within the control cabinet for the definition of the temperature class and/or the maximum surface temperature of the control cabinet.

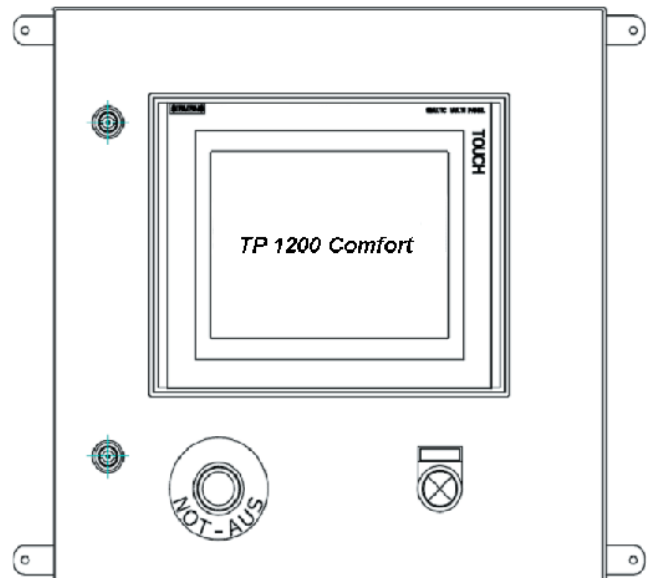

We are flexible to implement special customer requirements, such as wall installation, integration housings or cantilever arm systems.

At Exepd, all requirements of Directive **2014/34/EU** with regard to documentation, internal production monitoring and operating manuals are complied with and documented.

As a supplier specialised in customized special solutions including specifically adapted processes, we at Exepd guarantee short delivery periods and fair pricing.

Panel with swiver arm

Panel for wall installation
