

Description

The Exepd ground distribution block is used on machinery and equipment as a central grounding point. The ground distribution block is available in two sizes. Up to 2 single cores with 16mm² and a maximum of 10 single cores up to 4 mm² can be connected to the large ground distribution block.

At the small ground distribution block up to 10 single wires up to 4mm².

The ground distribution blocks are made of corrosion-resistant nickel-plated brass. They are rated according to EN60079-0 and EN60999-1 for safe use in potentially explosive atmospheres.
